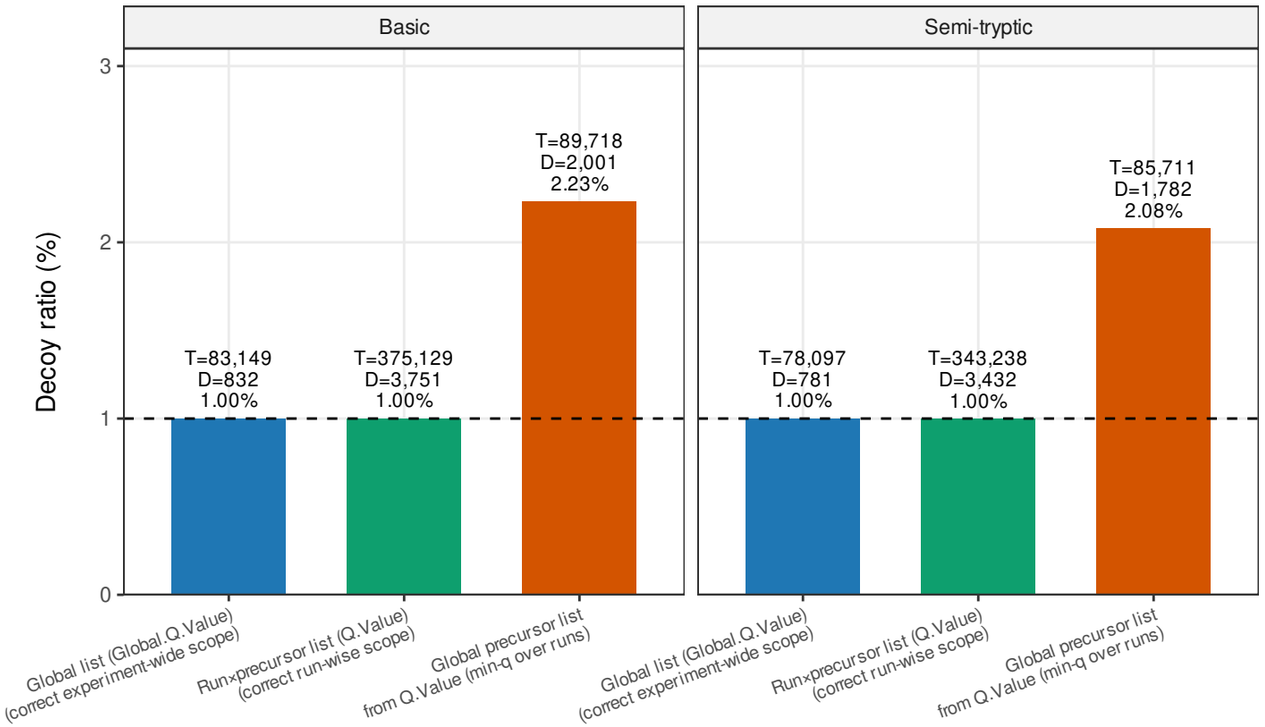
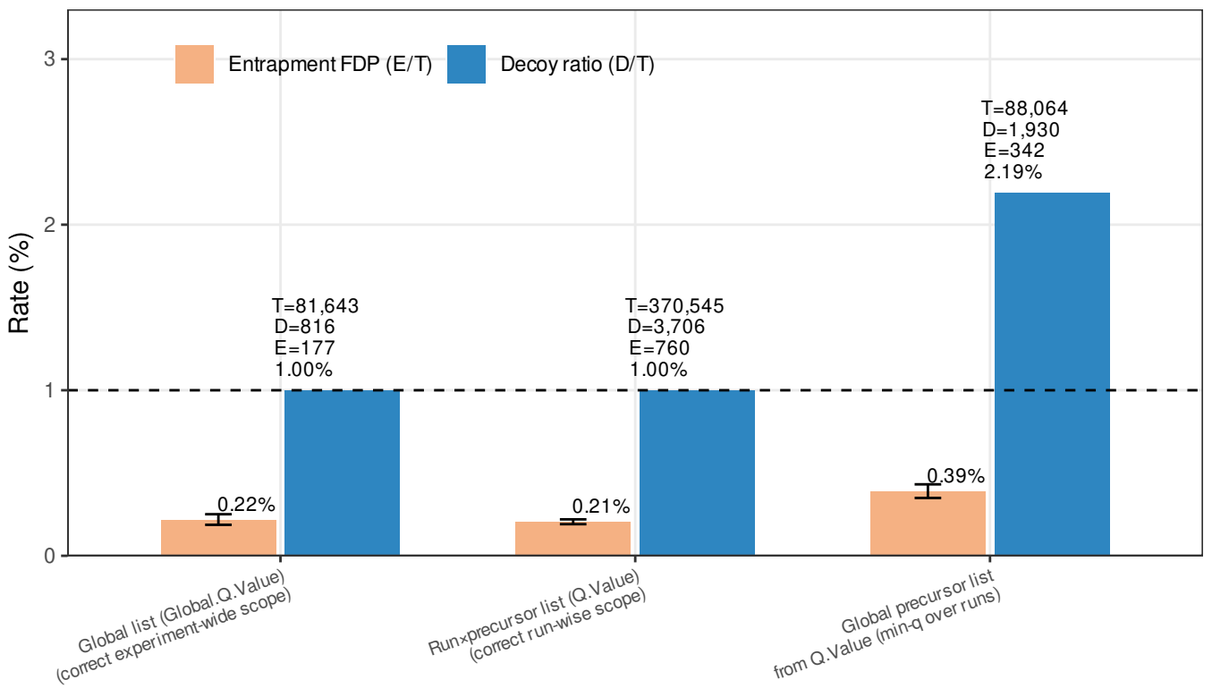
A. Scope audit at α = 1%: recomputed decoy ratio

Bars show Dα/Tα; dashed line is the nominal 1% claim



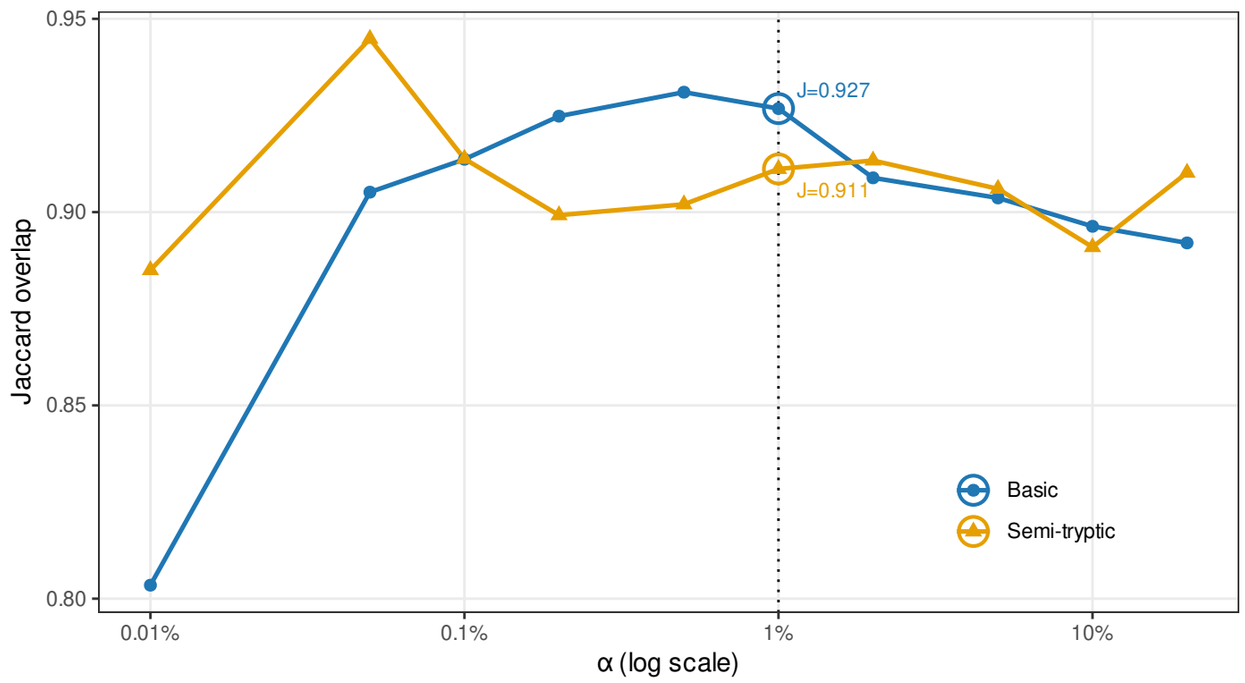
C. Scope audit at α = 1% with external entrapment

Blue: internal decoy ratio (D/T). Orange: external entrapment FDP (E/T) with 95% Wilson interval



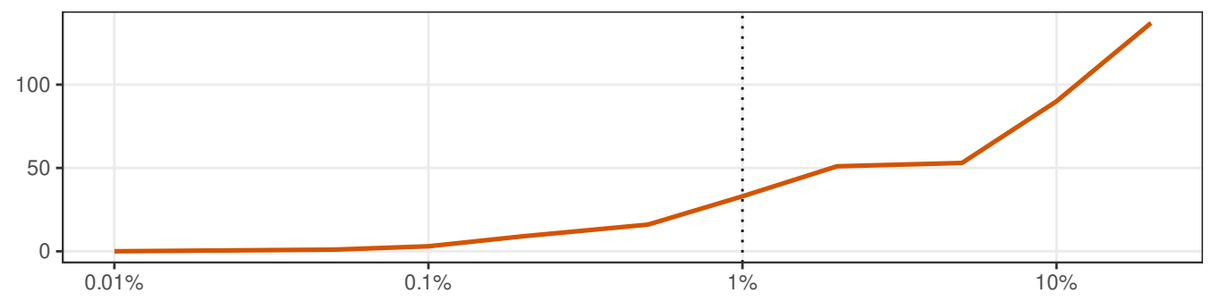
B. Scope-disagreement curve

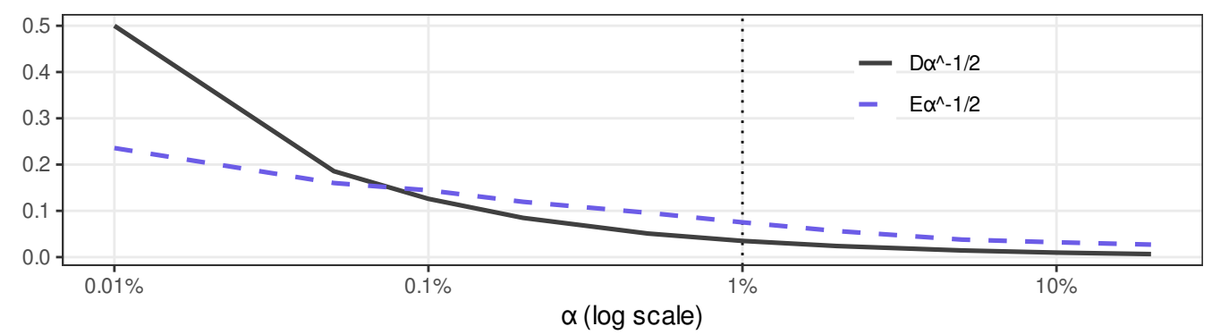
Jaccard overlap: Global.Q.Value list vs min-over-runs Q.Value list



D. Entrapment-based stability to cutoff perturbation

Change in accepted entrapment matches |E((1+ε)α) − E(α)|, ε = 0.2





Decoy-support index Dα^-1/2 and entrapment-support index Eα^-1/2
